Causes of a High Absolute Monocyte Count. A high absolute monocyte count, or monocytosis, can be the result of a viral infection such as mononucleosis, mumps or measles. In some cases, a more serious disease may be indicated by a high monocyte count such as tuberculosis, pneumonia, leukemia or chronic inflammatory disease. Monocytes are produced in the bone marrow and then enter the blood, where they account for about 1 to 10% of the circulating white blood cells (200 to 600 monocytes per microliter of blood). After a few hours in the blood, monocytes migrate to tissues (such as spleen, liver, lungs, and bone marrow tissue), where they mature into macrophages.
